DAY-04 PROBLEMS

DATE: 10/06/2024

1.COUNTING ELEMENTS

```python
def count_elements(arr):
    element_set = set(arr)
    count = 0
    for num in arr:
        if num + 1 in element_set:
            count += 1
    return count
print(count_elements([1, 2, 3]))
```

2.PERFORM STRING SHIFTS

```python
def string_shifts(s, shift):
    total_shift = 0
    for direction, amount in shift:
        if direction == 0:
            total_shift -= amount
        else:
            total_shift += amount
    n = len(s)
    total_shift %= n
    return s[-total_shift:] + s[:-total_shift]
print(string_shifts("abc", [[0, 1], [1, 2]]))
```

3.LEFTMOST COLUMN WITH ATLEAST A ONE

```python
def leftmost_column_with_one(binaryMatrix):
    rows, cols = binaryMatrix.dimensions()
    current_row, current_col = 0, cols - 1
    leftmost = -1
```

```python
        while current_row < rows and current_col >= 0:
            if binaryMatrix.get(current_row, current_col) == 1:
                leftmost = current_col
                current_col -= 1
            else:
                current_row += 1

    return leftmost

class BinaryMatrix:
    def _init_(self, mat):
        self.mat = mat

    def get(self, row, col):
        return self.mat[row][col]

    def dimensions(self):
        return [len(self.mat), len(self.mat[0])]
binaryMatrix = BinaryMatrix([[0, 0], [1, 1]])
print(leftmost_column_with_one(binaryMatrix))
```

4.FIRST UNIQUE NUMBER

```python
from collections import deque
class FirstUnique:
    def _init_(self, nums):
        self.queue = deque()
        self.counts = {}
        for num in nums:
            self.add(num)

    def showFirstUnique(self):
```

```python
        while self.queue and self.counts[self.queue[0]] > 1:
            self.queue.popleft()
        return self.queue[0] if self.queue else -1

    def add(self, value):
        if value in self.counts:
            self.counts[value] += 1
        else:
            self.counts[value] = 1
            self.queue.append(value)
firstUnique = FirstUnique([2, 3, 5])
print(firstUnique.showFirstUnique())
firstUnique.add(5)
```

5.VALID STRING

```python
class TreeNode:
    def _init_(self, val=0, left=None, right=None):
        self.val = val
        self.left = left
        self.right = right

def isValidSequence(root, arr):
    def dfs(node, arr, index):
        if not node or index == len(arr) or node.val != arr[index]:
            return False
        if index == len(arr) - 1:
            return not node.left and not node.right
        return dfs(node.left, arr, index + 1) or dfs(node.right, arr, index + 1)

    return dfs(root, arr, 0)
root = TreeNode(0, TreeNode(1, TreeNode(0, None, TreeNode(1)), TreeNode(1, TreeNode(0),
TreeNode(0))), TreeNode(0, TreeNode(0)))

arr = [0, 1, 0, 1]
```

```python
print(isValidSequence(root, arr))
```

6. KIDS WITH THE GREATEST NUMBER OF CANDIES

```python
def kidsWithCandies(candies, extraCandies):
    max_candies = max(candies)
    return [(candy + extraCandies) >= max_candies for candy in candies]
print(kidsWithCandies([2, 3, 5, 1, 3], 3))
```

7.MAX DIFFERENCE

```python
def maxDifference(num):
    str_num = str(num)
    max_num = min_num = num

    for d in str_num:
        if d != '9':
            max_num = int(str_num.replace(d, '9'))
            break

    for d in str_num:
        if d != '1' and d != '0':
            min_num = int(str_num.replace(d, '1'))
            break

    return max_num - min_num

print(maxDifference(9))
```

8. CHECK IF A STRING CAN BREAK ANOTHER STRING

```python
def checkIfCanBreak(s1, s2):
    s1, s2 = sorted(s1), sorted(s2)
    return all(x >= y for x, y in zip(s1, s2)) or all(x <= y for x, y in zip(s1, s2))
print(checkIfCanBreak("abc", "xya"))
```

9.NUMBER OF WAYS TO WEAR DIFFERENT HATS TO EACH OTHER

```python
def number_ways_to_wear_hats(hats):
    MOD = 10**9 + 7
    n = len(hats)

    hat_to_person = {}
    for person, hats_list in enumerate(hats):
        for hat in hats_list:
            if hat not in hat_to_person:
                hat_to_person[hat] = []
            hat_to_person[hat].append(person)
    dp = [0] * (1 << n)
    dp[0] = 1
    for hat in range(1, 41):
        if hat in hat_to_person:
            for mask in range((1 << n) - 1, -1, -1):
                for person in hat_to_person[hat]:
                    if mask & (1 << person) == 0:
                        dp[mask | (1 << person)] = (dp[mask | (1 << person)] + dp[mask]) % MOD
    return dp[(1 << n) - 1]

hats = [[3,4],[4,5],[5]]
print(number_ways_to_wear_hats(hats))
```

10.DESTINATION CITY

```python
def destination_city(paths):
    starting_cities = set()
    for start, end in paths:
        starting_cities.add(start)
```

```python
    for start, end in paths:
        if end not in starting_cities:
            return end

paths = [["London","New York"],["New York","Lima"],["Lima","Sao Paulo"]]
print(destination_city(paths))
```
